

INSTRUCTOR USER GUIDE

The proof editor is the same as for students. For writing steps, rules, definitions, and induction, see [STUDENT USER GUIDE](#).

This guide covers instructor accounts, authoring scaffolded problems, courses, assignments, and reviewing student work.

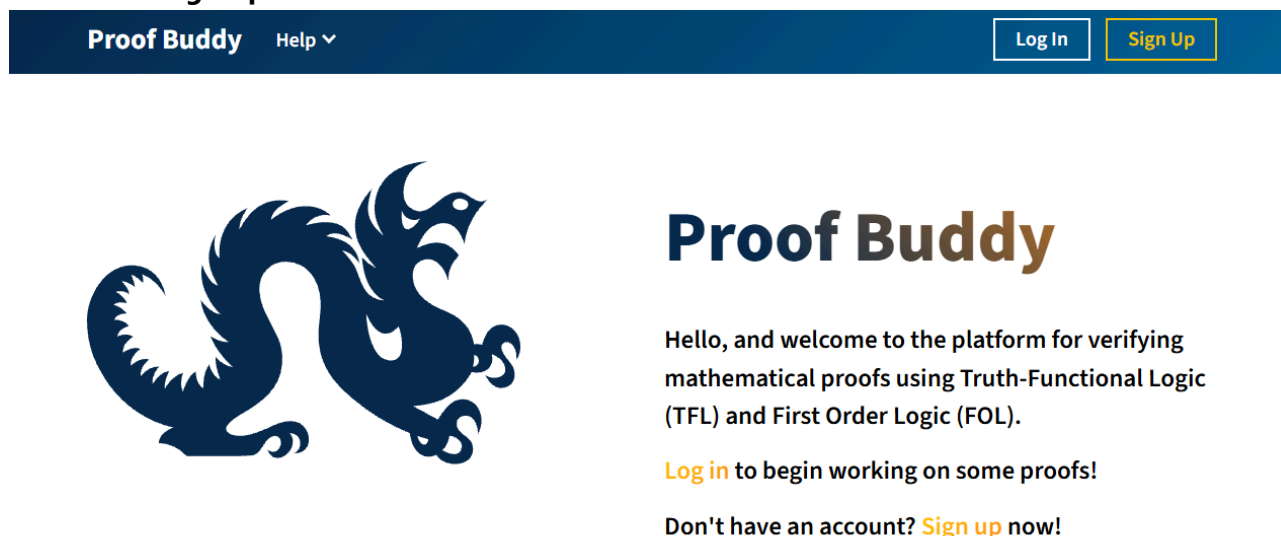

Welcome

To access Proof Buddy, visit proofbuddy.net

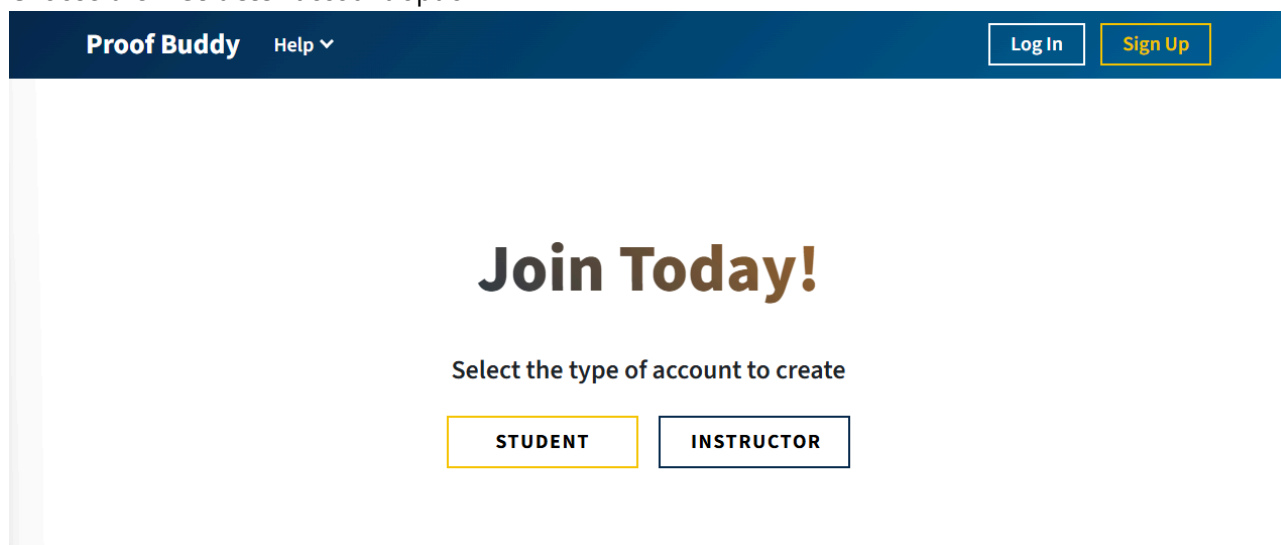

1. Account and Home

1.1 To create an (instructor) account:

1. Click on the **Sign Up** button

2. Choose the **Instructor** account option

- Click **Sign Up** button after filling out **Username**, **Email**, **Password**, and **Confirm Password** fields

Proof Buddy [Help](#)

[Log In](#) [Sign Up](#)

Sign up as an instructor

SIGN UP

Student and instructor accounts are chosen at sign up and do not switch later.

1.2 Logging In:

- Click on the **Login** button
- Fill in **Username** and **Password** fields, then click **Login**

Proof Buddy [Help](#)

Forgot password?

No worries, we'll send you reset instructions.

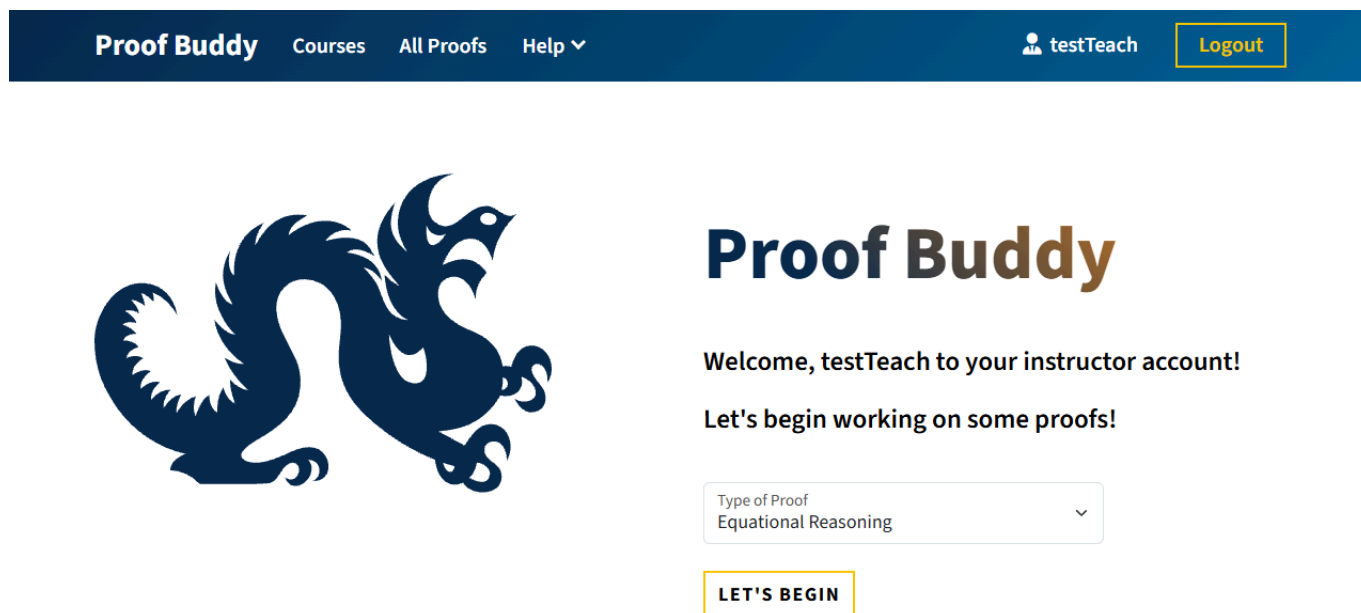

RESET PASSWORD

[← Back to log in](#)

1.3 Account Home:

Once logged in, you will see **Proof Buddy**, **Courses**, **All Proofs**, and **Help** in the Header. By default, you will be on the home page upon login (which can also be reached by clicking **Proof Buddy** in the Header).

- **Courses:** where you create and manage courses you own, or join another instructor's course as an observer
- **All Proofs:** your proof library. Proofs you attach to assignments are copied from here

Create a new proof by selecting Equational Reasoning or Induction in the **Type of Proof** dropdown and clicking **Let's Begin**. How to write the proof itself is in the [STUDENT USER GUIDE](#).

Proof Buddy

Welcome, testStu to your student account!

Let's begin working on some proofs!

Type of Proof
Equational Reasoning

▼

Equational Reasoning

Induction

If you open a course you do not own, you see the student-style (observer) view, not the manage page.

2. Author a Problem

Write the full solution first, then hide the parts students should fill in, then set support. Attach that snapshot to an assignment (see [§4](#)).

How to enter goals, apply rules, use definitions, and finish a proof: [STUDENT USER GUIDE §2–§7](#).

2.1 Hide lines (eye icons)

On each proof line, instructors see eye buttons that students do not:

- **Hide / Unhide Rule:** students must type the justification (for example `eval +`)

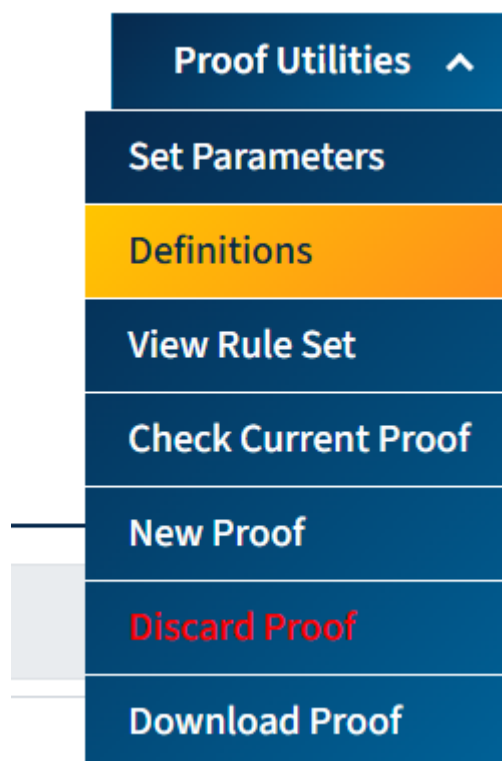

- **Hide / Unhide Expression:** students must type the expression on that line

Click the eye so the field is hidden before you assign the proof. Students fill the blank and click **Generate & Check**. The step is accepted only if it matches what you stored.

You can still **Check Current Proof** as an instructor while lines are hidden. Students cannot mark the proof complete until every hidden field is filled correctly.

2.2 Hide a definition body

1. Open **Proof Utilities** → **Definitions**

2. Create or edit a definition

Create a new definition

Label

Enter Label

Type

Enter Type

Expression (leave blank to declare a generic)

Enter Expression

Enter Notes

 function definition visible to users

Go Back

Create Definition

3. Use the eye next to the expression to hide the body

Edit definition

Label

(double n)

Type

INT>INT

Expression (leave blank to declare a generic)

(if (zero? n) 0 (+ 2 (double (- n 1))))

Enter Notes

 function definition hidden from users

Go Back

Update Definition

Students see that the definition exists but must reconstruct the hidden expression. Built-in definitions (**length**, **append**) cannot be edited or deleted; you can still enable or disable them on the proof.

Default definitions

(length L)

(append L M)

(reverse L)

User definitions

User Generics

Close Definitions Window

Create New Definition

2.3 Set Parameters

Set Parameters is in **Proof Utilities** and is instructor-only.

1. Open **Proof Utilities**
2. Click **Set Parameters**
3. Choose **Low** or **High** per row (or **ALL** to set every row at once)
4. Save

Set Parameters

Parameter	Low Support	High Support
ALL	Low	High
Error Messages	Low	High
Current LHS/RHS	Low	High
Induction Hypothesis	Low	High
Premise	Low	High
Rule Set 	Low	High
Value Mapping	Low	High
Rewrite Complexity	Low	High

Cancel

Save

What students see:

- **Error Messages:** Low: generic “your latest command contains an error”. High: targeted hint
- **Current LHS/RHS:** Low: those fields are not shown. High: they stay visible
- **Induction Hypothesis:** Low: student types it; only under **Proof Utilities** → **Show IH**. High: autogenerated and visible
- **Premise:** Low: student types it. High: autogenerated

- **Rule Set:** Low: full list. High: only the rules you allow (click the pen badge to pick eval/rewrite rules)

Configure Visible Rules ✕

Select rule names to include. (Duplicates for different variations are hidden).

Eval Rules [Toggle All](#)

- ☒ first
- ☒ rest
- ☒ cons
- ☒ if
- ☒ null?
- ☒ zero?
- ☒ and
- ☒ or
- ☒ not
- ☒ implies
- ☒ xor
- ☒ +, -, *, =, <, >, <=, >=
- ☒ quotient
- ☒ remainder
- ☒ expt

Rewrite Rules [Toggle All](#)

- ☒ cons-first-rest
- ☒ first-cons
- ☒ rest-cons
- ☒ null?-cons
- ☒ zero?+
- ☒ <function name>

Back
Save All

- **Value Mapping:** Low: student types $x \mapsto \dots$ when applying a lemma or definition. High: mapping is inferred
- **Rewrite Complexity:** extra support row on the same screen

Rules already used in the proof stay locked on in the customized rule set. You cannot hide a rule the solution already depends on.

After you hide lines and set parameters, run **Check Current Proof** yourself so the library copy is complete before you attach it to an assignment.

3. Lemmas

Lemmas work the same way as for students. Complete and name a proof, then later type **apply** <proof name> on a highlighted matching expression. Full walkthrough: [Lemma Guide: Use Instructions](#) and [STUDENT USER GUIDE §5](#).

If an assignment requires a lemma:

- Finish that lemma in your library first
- Keep **High Support** if you want mapping inferred; use **Low Support** if students must type **x↦...**
- Attach both the lemma proof (if they need to complete it) and the proof that uses **apply**, or make sure the lemma is already a completed proof they can look up under **All Proofs** after they start the assignment copy

4. Courses, Rosters, and Assignments

Classroom setup details: [Course User Instructions: Instructor Operations](#).

Recommended order: finish the solution proof → hide lines and set parameters → attach it from your library → mark the course **Active** → share a join code (codes last **7 days**).

4.1 Create a course

1. Click **Courses** in the header

Proof Buddy Courses All Proofs Help ▾ testTeach Logout

Instructor View: My Courses

Join Course + Create Course

Course Name ▾	Status	Students	Action
test class	☒ Active	1	Manage

Showing 1 to 1 of 1 entries

« < 1 > »

2. Click **Create Course**

3. Provide a unique course name. You can optionally generate a join code immediately

The screenshot displays the 'Instructor View: My Courses' interface. At the top, there's a navigation bar with 'Proof Buddy', 'Courses', 'All Proofs', and 'Help'. A user profile 'testTeach' and a 'Logout' button are on the right. Below the navigation bar, the 'Instructor View: My Courses' section features a 'Join Course' button and a '+ Create Course' button. A table lists the courses:

Course Name	Status	Students	Action
test class	Active	1	Manage

Below the table, it says 'Showing 1 to 1 of 1 entries'. A 'Create New Course' modal is open, showing a text input for 'Course Name' with the placeholder 'e.g., CS 101: Discrete Math'. Below the input is a checkbox for 'Generate an enrollment join code (Valid for 7 days)' which is unchecked. A note states 'You can always generate or disable join codes later from the course settings.' At the bottom of the modal are 'Cancel' and 'Create Course' buttons.

New courses start inactive. Students cannot see them until **Course Visibility** is **Active**.

You can also click **Join Course** and paste another instructor's code. That opens their course in the student-style observer view, not **Manage Course**.

4. Save when the form is filled

The screenshot shows the 'Manage Course: test class' page in Proof Buddy. A 'Create' modal is open, allowing the user to create a new assignment. The modal contains the following fields and options:

- Selected Proofs:** A table with one proof named 'test2' with tag 'test' and type 'Equational Reasoning'. There is a '+ Add Proofs' button.
- Assignment Name:** A text input field containing 'test 2'.
- Set Due Date:** A date and time picker set to '09/20/2026 11:59 PM'.
- Target Course:** A dropdown menu set to 'test class'.
- Buttons:** 'Cancel' and 'Publish Assignment'.

The background page shows course details for 'test class', including visibility settings, course term (Spring 2026), and a list of assignments. The 'Enrollment Code' section is also visible.

The assignment stores a **copy of the proof as it is now** (hidden lines, definitions, and parameters included). Editing the library proof later does not change copies already attached.

Edit (pen icon): you can always rename the assignment, change the due date, reorder proofs, and add proofs. You can remove or rename a proof only if no student has started that proof.

5. Watch and Comment

On the assignment **Action** column, click the eye icon (**View Student Progress**).

test - Student Progress		✕	
Student		test	
testStu (example2@email.com)		🟡 In Progress	
		Close	

The progress matrix maps each student to each proof:

- **Not Started**
- **In Progress**
- **Completed**
- **Completed (Late)**

Click a status that is not **Not Started** to open that student's proof. A banner shows whose proof it is.

Send Share Request

Incoming and sent shares appear on **Manage Course** under **Shared Assignment Packages (Incoming Packages / Sent Tracking)**. Accept or decline incoming packages there.

Both instructors must already have a course. You cannot send or receive an assignment share if the other instructor has no course.

7. FAQ

Students cannot join or cannot see the course.

- Mark **Course Visibility Active**, and give them a join code that has not expired (7 days). They must use a **student** account.

Students have different proofs from each other.

- The assignment copies the proof at assign/edit time. Change the library copy, then add that version to a new assignment (or to an assignment where nobody has started that proof yet).

I cannot remove a proof from an assignment.

- A student has already started it. You can still reorder and add proofs.

Share failed.

- The other instructor needs at least one course. Shares only go between existing courses.

I opened a colleague's course and cannot manage it.

- That is observer mode (student-style view). Only the owner sees **Manage Course**.

Students cannot check the proof complete.

- Something is still hidden, or LHS does not yet equal RHS. Fill-in steps must match the stored solution.

I do not see Set Parameters.

- That item is instructor-only, in **Proof Utilities**. Students never see it. Set parameters on the library proof *before* you attach it to an assignment, so every student copy gets the same settings.

I signed up as a student by mistake.

- Role does not switch. Create an instructor account from **Sign Up → Instructor**.
