

1. Create and configure the environment variables in the `.env` file under `/django_server` like so:
2. Make sure that `DB_HOST` equals `"localhost"`.
3. Make sure `DB_USER` equal `"root"`.
4. Make sure `DB_PASSWORD` equals the password you created when you installed MySQL Workbench. If you opted for no password, leave this an empty String.
5. Make sure `DB_NAME` equals the name of the Schema you created in MySQL Workbench. If you followed the tutorial, this will be `"proof_buddy_development"`.
6. Make sure `DB_PORT` is set to whatever port your database is running on.
7. `DEBUG` should be `True` for development and `False` for production.
8. `SECRET_KEY` can be generated online. (Google generate secret key for django)
9. `EMAIL_HOST` should be host of email server.
10. `EMAIL_PORT` should be port email server is running on.
11. `EMAIL_HOST_USER` should be the email address of the account.
12. `EMAIL_HOST_PASSWORD` password of the email host. (If using google as email server look into adding an app password)
13. `DJANGO_SUPERUSER_PASSWORD` password for super user to access django backend
14. `DJANGO_SUPERUSER_USERNAME` username for super user to access django backend
15. `DJANGO_SUPERUSER_EMAIL` email for super user to access django backend
16. `FRONTEND_URL` url proofbuddy is accessible by.
17. `BACKEND_URL` url the backend will hosted on.
18. Final note: Never push your `.env` file to Github or share it on any public forum. This will cause a security risk for yourself. Presently, the `.gitignore` is set up to ignore these files.

```
# Database configurations.
DB_NAME=proofbuddy_development
DB_HOST=localhost
DB_USER=root
DB_PASSWORD=password
DB_PORT=3306

# Email configurations.
EMAIL_HOST=smtp.gmail.com
EMAIL_PORT=587
EMAIL_HOST_USER=email@example.com
EMAIL_HOST_PASSWORD=django_app_password

# Django configurations.
DJANGO_SUPERUSER_PASSWORD=password
DJANGO_SUPERUSER_USERNAME=admin
DJANGO_SUPERUSER_EMAIL=email@example.com
DEBUG=True
SECRET_KEY=SOME_SECRET_KEY
FRONTEND_URL=http://localhost:3000
BACKEND_URL=http://localhost:8000
```
