

1. Now its time to run the application. The next few steps will detail how to do this:
2. Start the backend server by opening a new terminal:

```
cd django_server
python manage.py migrate
python manage.py createcachetable
python manage.py runserver
```

3. Start the frontend client by opening a new terminal:

```
cd client
npm start
```

5. Now the full application is running, you should see your homepage open automatically in a browser.
However, if you need to access the homepage without the automatic prompt: simply type [local](#)
