

Docker For Deployment

Database Deployment

To deploy Proof Buddy database run the following commands.

This should be done from a unix system.

Before running the commands ensure you have docker and its dependencies installed.

Create an `.env` with the database configurations.

```
# MariaDB configurations.
MYSQL_DATABASE=proofbuddy_production # whatever name you want
MYSQL_ROOT_PASSWORD=password # choose a strong password
MYSQL_USER=root # can be whatever you want
MYSQL_PASSWORD=password # choose a strong password
```

```
cd database
sudo docker compose up --build -d
```

Application Deployment

To deploy Proof Buddy create a `.env` file is created with the necessary environment variables.

```
# Database configurations.
DB_NAME=proofbuddy_production # the name you choose for your database
DB_HOST=localhost # where is your database running?
DB_USER=root # can be whatever you want
DB_PASSWORD=password # choose a strong password
DB_PORT=3306

# Email configurations.
EMAIL_HOST=smtp.gmail.com
EMAIL_PORT=587
EMAIL_HOST_USER=email@example.com
EMAIL_HOST_PASSWORD=django_app_password

# Django configurations.
DJANGO_SUPERUSER_PASSWORD=password # choose a strong password
DJANGO_SUPERUSER_USERNAME=admin
DJANGO_SUPERUSER_EMAIL=email@example.com
DEBUG=False # True when in dev
SECRET_KEY=SOME_SECRET_KEY # use this: https://django-secret-key-generator.netlify.app/
FRONTEND_URL=http://localhost:3000 # the domain name of where the frontend is
```

```
hosted  
BACKEND_URL=http://localhost:8000 # the domain name of where the backend is hosted
```

This is an example change the values to match your configurations.

To deploy Proof Buddy Server run the following commands.

```
sudo docker compose up --build -d
```
